Näide Bolti masinõppe mudelistest

```
from ocr.imports import *
```

```
doc_type = 'uk_driving_licence'
```

1. Original image

This is a made up specimen, not an actual licence

```
context = [{"s3_file_path": path/"specimen.png"}]  
img = read_image(context["s3_file_path"])  
show(img)
```

Python

2. Preprocessing the image and finding text

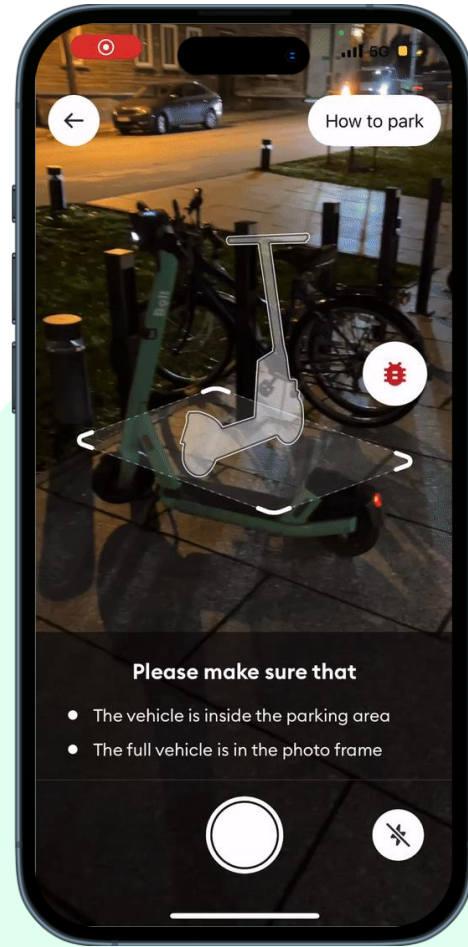

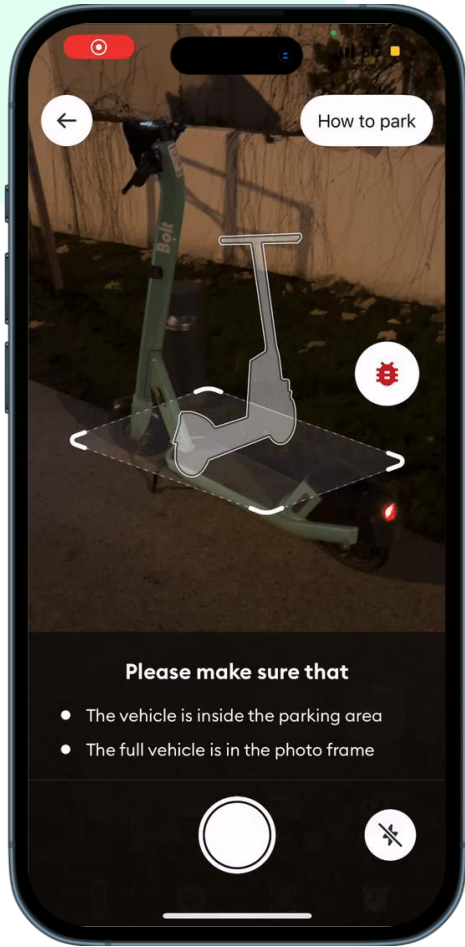

```
preproc_img = model.preprocess(model.config, model.mask, img)  
bboxes = model.bbox.predict(preproc_img)  
show(preproc_img, bboxes=[pred["bbox"] for pred in bboxes], cont_thick=2)
```

Python

3. Extract the results

```
result = model.predict(context)  
model.to_series(result).unstack()
```

Python

Tee endast foto

Isikutuvastus

See protsess tuvastab sinu isiku ja aitab kaitsa sinu kontot identiteedivarguse eest.

Veendu, et juurdepääs kaamerale oleks lubatud, ja tee seejärel selfi.

Järgmine

AI-d puudutavad dilemmad

1. Kas klient **peab teadma**, et räägib robotiga?
2. Kuidas vähendada mudelite **erapoolikust?**

**Rutiinise kontoritöö töökohad kaovad,
ja mitte 5 aasta pärast, vaid juba täna.**
